

Slip-Resistant Hand Tool Handle

Abstract

A hand tool such as a folding knife, fixed blade knife, multitool and the like has a handle with a slip-resistant grasp. The handle incorporates a bi-directional saw-tooth pattern formed into the handle surface that defines a ridged pattern that is generally transverse to the longitudinal axis of the handle. A first plurality of ridges face in the rearward direction and a second plurality of ridges face in the forward direction. The bi-directional pattern provides a secure grip in all orientations.
